

Des boules de Noël 3D faites en papier fait main

v15976

Confectionnez une boule de Noël 3D en découpant cinq formes identiques à partir d'un gabarit. Cousez-les ensemble les unes sur les autres à l'aide d'une machine à coudre. Fixez les extrémités en faisant un nœud à chaque extrémité. Dépliez la boule de Noël par le centre. Vous pouvez décorer la boule en plaçant de la colle à paillettes sur les bords.

Comment faire

1 Print out the template which is available as a PDF file at the bottom of this page. Cut out five identical bauble shapes either from the same piece of patterned paper or from different pieces of patterned paper. For a different design, cut three shapes from one piece of patterned paper and two from a different piece of patterned paper as shown in the photo.

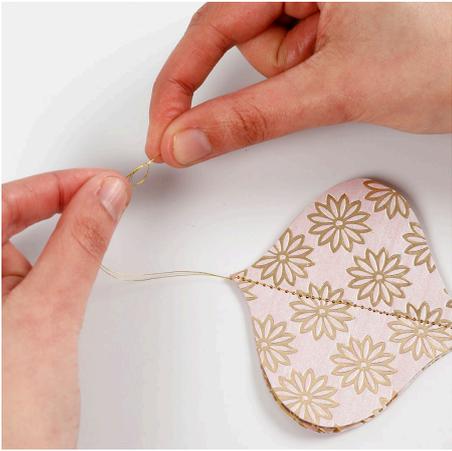

2 Place the bauble-shaped paper cut-outs on top of each other and fasten them together using a sewing machine. You don't need a special setting on your sewing machine for sewing paper, but a jeans sewing machine needle enables you to easily sew through all the layers of paper. Practise on scrap paper. Don't secure the ends but instead pull out approx. 15 cm of the lower thread and the upper thread behind prior to sewing. Sew down the middle of the layers and pull out approx. 15 cm of lower and upper thread before cutting.

3 Tie a double knot at each end of the Christmas bauble. Trim the threads closely at the bottom of the bauble, but keep the threads at the top; see the next step.

4 Tie a knot at the top approx. 10 cm from the bauble, making a loop for hanging.

5 Unfold the Christmas bauble by bending the two layers on each side of the middle forwards and backwards.

6 Decorate the edge of the bauble with glitter glue. Decorate one half, leave to dry and then decorate the other half.
