

How to make a slab bowl from self-hardening clay

v16105

Make a slab bowl from white clay using a plastic mould. Roll out the clay to a min. 1 cm thickness and use the bowl as a mould. Leave the clay bowl to dry for 24-48 hours, then paint it with craft paint or decorate it with a paper raffia twist for the rim.

Comment faire

1 Knead and soften the clay in your hands. Roll out the clay to make a min. 1 cm thick square.

2 Use the bowl as a mould and trim the excess clay. Smooth out the edge with a modelling tool dipped in water.

3 Turn the mould upside down and gently work the clay down to the bottom, shaping it to the mould. Make sure to cover the inside of the mould with cling film to prevent the clay sticking to the mould.

4 Roll a small block of clay into a suitably sized foot ring for the bowl. Leave to dry.

5 You may decorate the rim of the bowl with holes and a paper raffia twist. Leave the bowl to dry for 24-48 hours.
