

## Silk Clay balls

v11569

It doesn't get any easier as this. Roll small balls from Silk Clay (which contains rubber and is therefore ideal for making balls which bounce really well). Challenge your imagination with the decorating. Roll small balls or small thin sausages which are part of the "drawing" on the surface of the ball. Finally roll the finished ball. The drying time depends on the size of the ball but is usually 1-2 days. The balls can bounce immediately ... and not many can wait till the very end of the drying time.
