

## Candle Holders with Transfer Colour

v11729

First the Transfer Colour for glass and porcelain is painted onto a plastic pocket and left to dry. Then the design is put onto a candle holder and hardened in a household oven at 160°C for 45 minutes. Now the colour can be washed in the dishwasher at 60°C. It can be difficult to make small details with the drawing tip of the bottle. You may start with an Outline Transfer Colour which dries within two hours. Then fill in with colours. Metal Applicator tips are available for the bottles with different nozzle sizes. These metal tips are fitted onto the bottle tip of Transfer Colour – now you can draw with a thin line and in more detail. There is a special plastic foil for drawing on. It is completely smooth, however, plastic pockets are also great to use. When applying the colour onto glass, use a small amount of water to help the colour stick to the smooth porcelain or glass – before hardening it in a household oven (not a fan assisted oven).

### *Comment faire*

**1** Draw on the plastic and let it dry.

**2** Remove and put onto glass.

**3** Harden in a household oven at 160°C for 45 minutes.
