

A Mosaic Ball

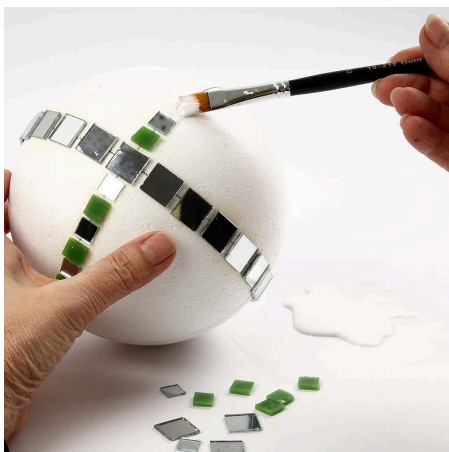

v11645

A polystyrene ball with mirror and glass mosaic tiles glued on using Paverpol sculpting glue and then filled with mosaic tile grout.

Comment faire

1. Divide the ball into quarters with a pencil, and then divide these into halves. Start from the line where the ball has been glued together.

2. Start by decorating on the drawn lines. Use Paverplast which can be used for outdoor items.

3. Then fill in the empty areas on the ball in a pattern of your choice.

4. Next fill in mosaic tile grout. Wipe off excess grout with a damp sponge, moving it in circles. When dry, fill in any cracks with an extra layer of grout. Use vinegar to remove the “dull” look on the mosaic tiles.
