

A Keyring Charm

v12270

This lovely keyring is made from braided satin cords with a beautifully decorated wooden bead. Small pieces of decoupage paper are glued onto the wooden bead and then varnished with Paverpol sculpting glue.

Comment faire

1. Glue small pieces of decoupage paper onto the wooden bead using Paverpol sculpting glue.

2. You may leave the wooden bead to dry by inserting a golf tee with a glued on magnet into the hole of the bead. The glued on magnet allows the golf tee to stand firmly on metal surfaces whilst drying.

3. Polish / smooth the varnished surface of the wooden bead by using a magnet glued onto a golf tee or by using a tea spoon.

4. Varnish the wooden bead two or three times with the Paverpol sculping glue. Let it dry between each application.

5. Use a tea towel or a similar piece of fabric for polishing the wooden bead to perfection.

6. Cut two pieces of satin cord; one measuring 1.5m and the other 0.5m, double them over and tie them onto a keyring.

7. Braid a section as shown with the two short cord ends in the middle.

8. Feed the four ends of the satin cords through the wooden bead and continue braiding.

9. Cut off the ends of the satin cords when the desired length is reached and tie a knot on each end.

10. Melt or glue each of the small ends and glue an end cap onto all the ends.
