

A Balloon Lamp

v12351

This lamp is made from Paper Yarn, dipped in Paverpol and then wrapped around a balloon shape. When the Paverpol has dried, the lamp will keep its shape.

Comment faire

1. Put the inflated balloons together with masking tape making the required shape.

2. Dip Paper Yarn in Paverpol and wrap it around the balloon shape in a tight layer.

3. Finish wrapping the paper yarn around the shape (remember to leave a hole at the top for the socket) and hang it to dry.

4. When the Paverpol is dry, pop the balloons.

5. Remove the popped balloons from the inside of the lamps with a hook.

6. Use bonsai wire for making a holder for the wire.

7. Attach the lamp socket in the top edge of the lamp.
