

## A Ring made from Silver-Plated Wire

v12718

Silver-plated wire is shaped around a ring stick and a crystal bead is attached to the ring.

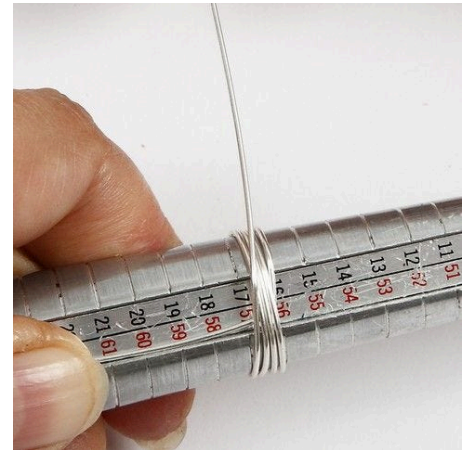

### *Comment faire*

**1.** Measure the appropriate ring size using the ring sizer.

**2.** The size can be found on the ring stick.

**3.** Wrap the silver-plated wire tightly around the ring stick at the correct size number.

**4.** Let the two ends go past each other and then wrap the ends around the ring. This now forms the bottom of the ring.

**5.** Use a new piece of silver-plated wire to wrap along the top of the ring towards the middle and bend it straight upwards. Use another piece of silver-plated to wrap along the top of the ring and towards the middle and wrap the end around the piece which is bent upwards.

**6.** Put the bead onto the stalk.

**7.** Use the tip of round nose pliers to twist the wire forming a coil. Nip off the end.
