

## A Ring made with Silver-Plated Wire and Beads

v12717

Silver-plated wire is shaped around a ring stick. Beads are sewn onto a bead cap using a thin piece of silver-plated wire.

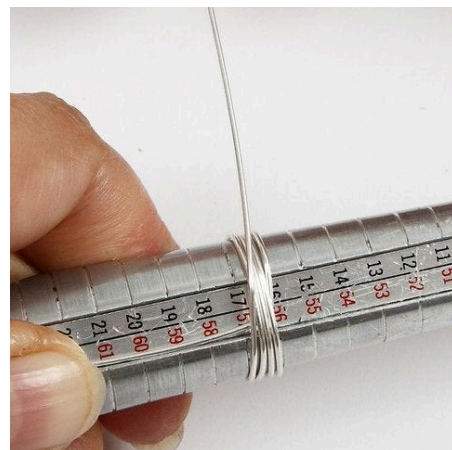

### *Comment faire*

**1.** Using a ring sizer, measure the size of the finger.

**2.** Find the size of the ring by putting it onto a ring stick.

**3.** Wrap the silver-plated wire tightly around the correct size number on the ring stick.

**4.** Let the two ends go past each other and then wrap the ends around the ring. Nip off the end.

**5.** Wrap a thin piece of silver-plated wire around the top of the ring. Leave one end long.

**6.** Push to flatten a bead cap.

**7.** Attach the bead cap onto the long end of the silver-plated wire.

**8.** Thread the beads onto the wire 1 – 2 – 3 at the time whilst “sewing” up and down through the holes of the bead cap – and around the ring.
