

A Collage and Cut-Outs made from Foam Rubber

v13246

The picture collage and the figures and shapes are cut from foam rubber sheets; with and without adhesive, glitter and die-cuts. Some parts are glued on using Dana Super Hobby glue where non-adhesive foam rubber is used.

Comment faire

1. Cut a piece of foam rubber with glitter to form the back section of the punched-out foam rubber frame. This frame has a self-adhesive reverse side. Attach the self-adhesive foam rubber letters and numbers onto the back.

2. Use your imagination and cut figures, shapes and small parts from foam rubber. Attach these onto the inside of the frame (like a framed picture) using Super Hobby glue.
