

## A Leather Bracelet with Stone Beads on a Fishing Line Nylon Cord

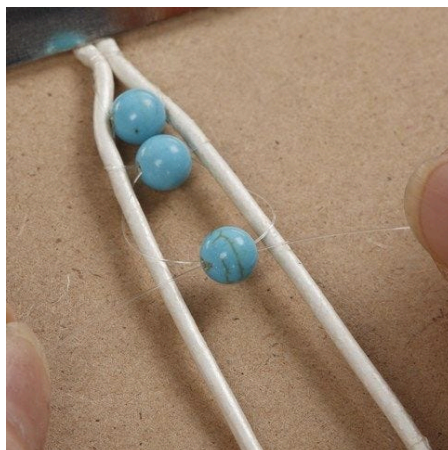

v13218

This bracelet is made using a braiding technique where beads are threaded onto a piece of fishing line nylon cord and tied around a piece of leather cord. A bead is attached at the end as a fastener for opening and closing the bracelet.

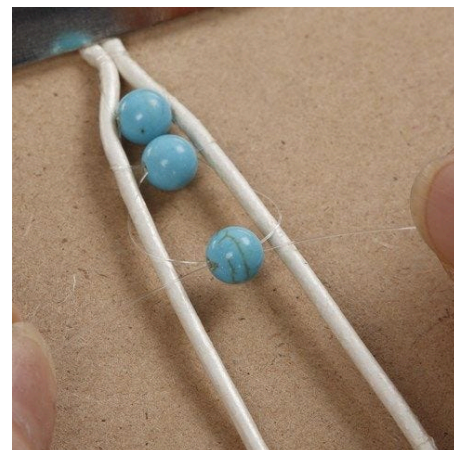

### *Comment faire*

**1.** Cut a 80cm long piece of leather cord and double it over. Cut a 110cm long piece of fishing line nylon cord and tie it tightly around one end of the doubled-over leather cord, making a loop. There are now two equal length ends of fishing line nylon cord on either side of the doubled-over leather cord. The loop on the leather cord is to be used as the fastener (opening and closing the bracelet).

**2.** Now pass each end of the fishing line nylon cord underneath each side of the leather cord. Thread each end of the fishing line nylon cord through the hole of a bead from opposite ends. Now pass the fishing line nylon cord over the leather cords ...

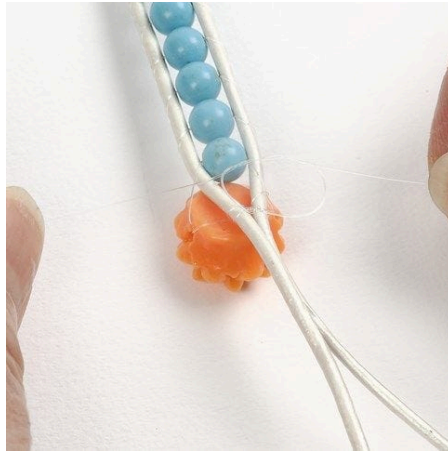

**3.** ... and underneath the leather cords. Tighten – and continue the described process until the bracelet has reached the desired length.

**4.** Thread the flower-shaped resin bead onto the bracelet in the same way as the stone beads.

**5.** Tie a reef knot or two or three double knots on the back of the bracelet. (This is done by twisting one end twice or three times inside the loop before tightening).

**6.** Tie the two leather cord ends together in a knot. Trim.
