

Plaster Cast and painted Figures

v13113

The plaster figures are made from casting compound, mixed with water and poured into moulds. After hardening, the figures are painted in a base colour using A-Color Glass paint and details are added with glass and porcelain markers.

Comment faire

1. Follow the indicated mixing ratio of water and casting compound on the packaging of the casting compound and sprinkle the casting compound into the water until a small peak has formed on the surface of the water. Stir the mixture to a soft mush and pour into the mould. Tap the mould lightly with your hand to avoid air bubbles in the plaster. Let it dry and harden.

2. Remove the mould from the plaster cast. Scrape off any unevenness on the figure with a craft knife.

3. Paint the plaster cast with A-Color Glass paint and let it dry.

4. Draw designs with a black glass and porcelain marker.

5. Fill in the drawn design using glass and porcelain markers in different colours.
