

Des bracelets confectionnés avec quatre cordons de satin tressés et avec un cabochon au milieu

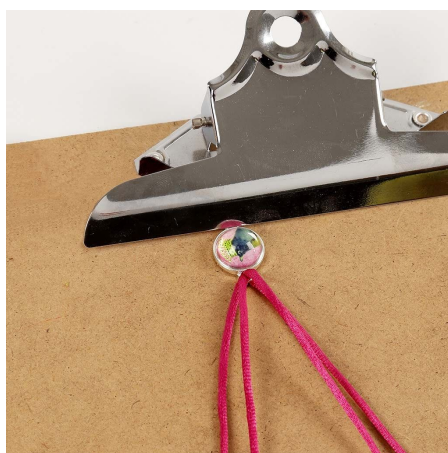

v14182

Ce bracelet est tressé avec deux cordons de satin doublés de chaque côté d'un cabochon dans une perle d'espacement. L'accroche est un fermoir magnétique en deux parties, lesquelles sont collées sur le bracelet.

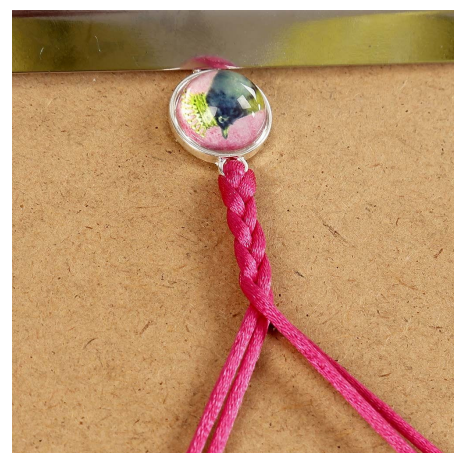

Comment faire

1 Glue a cabochon onto a spacer bead using Clear Multi Glue gel. Leave to dry.

2 Feed two 1 m satin cords through the eyelets on each side of the spacer bead, arranging them in a doubled-over fashion.. Secure the spacer bead on a clip board.

3 Plait as illustrated in the steps below.

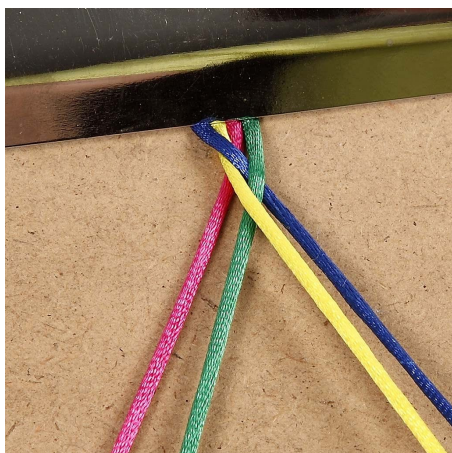

4 Please note that we have used four colours in the instructions for you to easily follow the principles of this technique.

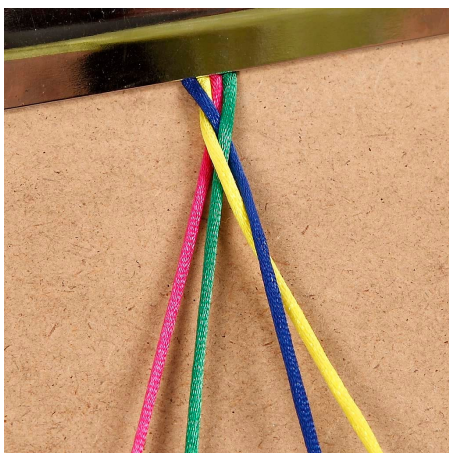

5 Start with the blue – on the very left. Place this to the right, over the two cords in the middle – yellow and pink, respectively.

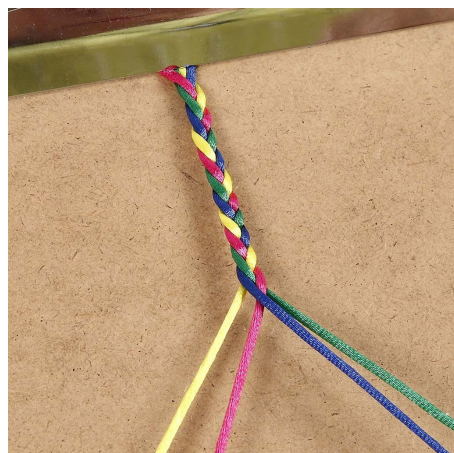

6 Place the green cord – on the very right – to the left over the nearest cord – the blue cord.

7 Place the yellow cord – on the very left – to the right over the two middle cords – pink and green, respectively.

8 Place the blue cord – on the very right – to the left over the nearest cord – the yellow cord.

9 Tighten with every plait.

10 When the desired length is reached, tie a cord tightly around the bracelet. Now turn the spacer bead in the clip board in order to plait the other side. Repeat the plaiting procedure with the two doubled-over cords on the other eyelet of the spacer bead.

11 Cut off the excess cords at both ends and glue the plait inside each part of the two-part magnetic clasp. A TIP! You may use a tapestry needle for pushing the plaits inside the clasp. Leave to dry.
