

## A Concrete Candle Holder cast in a Folding Mould

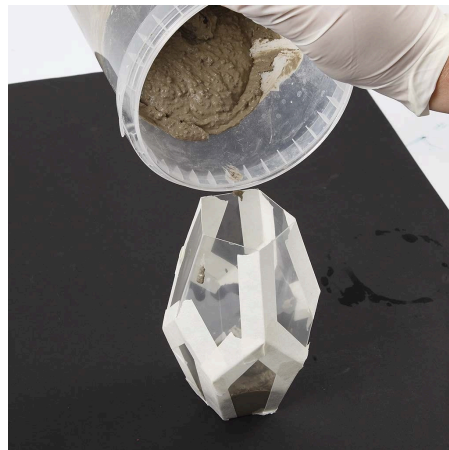

v14533

These candlesticks with metal candle holders for long candles and tea lights are cast with Concrete Craft in a folding mould.

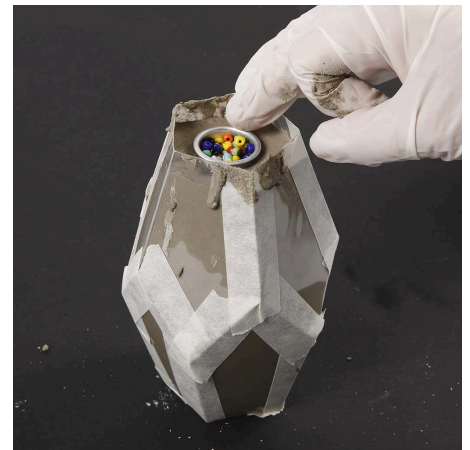

### *Comment faire*

**1** Folding mould: Fold the thin plastic sheet along the scored lines. Seal the joints together with masking tape.

**2** Mix Concrete Craft and water according to instructions on the bucket and pour the mixture into the mould. A TIP: You may use plaster as an alternative.

**3** Push a metal candle holder for tea lights/long candles into the middle of the liquid concrete in the mould. Add weight with beads to keep it in place when hardening.

**4** Remove the masking tape and remove the folding mould from the shape. Wash the mould with water so that it can be reused.
