

Une main moulée en plâtre dans un gant jetable

v14504

Cette main est coulée dans un composé de plâtre blanc. Nous avons utilisé pour cette réalisation un gant jetable en latex.

Comment faire

1 Pour water into a bucket and sprinkle plaster compound slowly until it forms a peak at the surface of the water. Leave it for about 8 min.

2 Stir well until air bubbles form on the surface. NB: Plaster generates heat during hardening (the larger the quantity, the greater the heat).

3 Pour the mixture into the disposable glove. A TIP: Ask somebody to help you hold the glove whilst pouring to ease the process.

4 Close the glove with a piece of string, tied tightly.

5 Leave the filled glove to dry on top of a round object in order to get a hollow shape. Leave to dry for approx. 1 hour. Cut away the glove.
