

Un large bracelet métallique texturé

v14744

Ce bijou est une bande métallique dont la surface a été travaillée en utilisant un tampon relief et des outils de chez Impress Art. La bande métallique est ensuite pliée sous la forme désirée.

Comment faire

1 Remove the plastic covering from one side of the metal band and place the metal band on the steel stamping block.

2 Place the design stamp vertically in the Simple Strike Jig with your chosen design facing the metal band and the Impress Art logo facing you. Strike the embossing stamp once with medium force using the metal stamping hammer. Repeat until the entire metal band is textured.

3 Use the bracelet bending bar to bend the metal band into a cuff shape. Place one end of the metal band into the bending bar face-up. Hold the end securely with your thumb and index finger. Bend the metal band around the bending bar.

4 Repeat on the other side of the metal band. Remove the plastic covering from the inside of the bracelet.
