

Battery-powered LED Lights with a woven Star on each Bulb

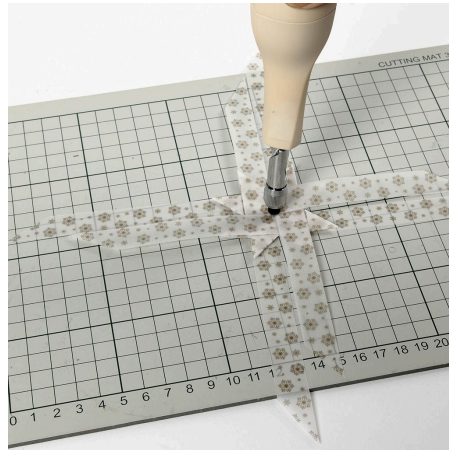

v14722

Each bulb on these LED lights is decorated with a star woven from vellum paper star strips with a design from Vivi Gade.

Comment faire

1 Weave 20 stars following the instructions on the pack until and including step 12. (A flat star with 8 star points).

2 Make a 4 mm large hole in the middle of each star. You may use a Screw Punch. Finish the weaving of the last 6 steps of the star using the instructions.

3 Enlarge the hole with a sharp object in each star and thread an LED through the hole. (You may use the handle of a thin brush to help).
