

## Glass Baubles with gold Glitter on the inside

v14701

These two cone-shaped Christmas baubles are decorated with loose glitter on the inside. The metal collar with the loop is separated from each bauble and glue is poured and distributed inside the bauble. Glitter is then poured inside and the bauble is shaken. The collars are re-attached when dry.

### *Comment faire*

**1** Carefully remove the metal collar from the bauble. Pour some special glue inside the bauble, (You may use a pipette). Place a finger over the opening of the bauble and distribute the glue evenly by shaking it. Pour out the excess glue.

**2** Pour loose glitter through the hole in the bauble. (You may use a paper funnel, if the opening is very small).

**3** Place a finger over the opening of the bauble and distribute the loose glitter evenly by shaking the bauble well. You may pour out the excess glitter or add more if necessary to cover the inside completely. Leave to dry and re-attach the metal collar.

**4** Tie a piece of string to the bauble. Here we have used a piece of bead chain with a matching fastener.
