

Un arbre de noël brillant d'argent à construire

v14675

Cet arbre de noël à construire s'allume avec une pile LED. La colle en gel est appliquée sur le support et l'étoile. Soupoudrez la poudre argentée sur la colle.

Comment faire

1 Assemble the tree by inserting the thin wooden sticks in different lengths into the holes of the trunk (the vertical wooden stick). (Start with the shortest stick at the top and continue the second longest etc. Do not attach the stand and the star yet. See the next step.

2 Apply Clear Multi Glue Gel to the stand and the star at the top, sprinkle silver glitter onto the wet glue immediately and leave to dry. Attach these two parts onto the tree at the top and bottom respectively and decorate with the battery-powered LED lights wrapped around the branches.
