

Painting and drawing on Terracotta

v15086

A transparent and glossy effect is achieved on light terracotta products using A-Color Glass paint which, with its rough and porous surface, is slightly absorbent. The paint does not require fixing in the oven and thin lines may be added with, for example, a contour marker for glass and porcelain.

Comment faire

1 Paint with A-Color Glass paint and leave to dry. This paint does not require fixing in the oven.

2 You can draw with opaque glass and porcelain markers on the completely dry surface. These markers dry to a glossy finish like the A-Color Glass paint). The contour marker is ideal for drawing small, detailed patterns.

Another variant Vary the look by using several colours of A-Color Glass paint as well as opaque glass and porcelain markers in several colours.
