

## Ghosts made from Balloons with battery-powered LED Lights

v15066

Place the LED light inside the balloon prior to inflating it.  
The light can be turned on and off by shaking the balloon.

### *Comment faire*

**1** Place a battery in the LED light. Remember to switch on the light before placing it inside the balloon. Turn the light on/off by hitting or shaking the balloon into the palm of your hand.

**2** Blow up the balloon to approx. 14 cm in diameter. Attach the self-adhesive facial parts onto the balloon and attach a stick to the balloon.

**3** Double over a piece of the table runner to cover the entire balloon and the stick. Cut and staple together at the top.

**4** Place the balloon inside. Staple the cover down the sides or secure the sides with double-sided adhesive tape.

**5** Cut a zig-zag edge at the bottom of the ghost (table runner). The ghosts can now be placed outside in the ground or inside in pots with sand or similar.
