

Decorative Flowers made on a Quilling Fringer

v15068

Decorative flowers made on a Quilling Fringer.

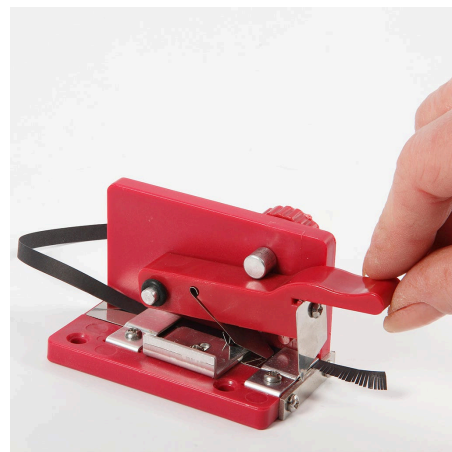

Comment faire

1 You can use the quilling fringer tool for 0.5 mm – 1 cm wide paper strips (quilling paper strips). Feed the strips into the device using the included tools.

2 Pull the paper strip forward to the cutting blade.

3 Turn the adjustment dial on the fringer tool to adjust the distance between the cuts. The highest position on the blade gives a wide cut spacing - the lowest position gives a very close spacing.

4 After cutting on the Quilling Fringer, attach the paper strip to the quilling pen and roll it tightly. You can achieve different looks by first rolling the centre of a flower and then you glue on a cut strip. Glue the end and the under side.

5 Unfold the flower.
