

Illuminated Houses with LED Tea Lights

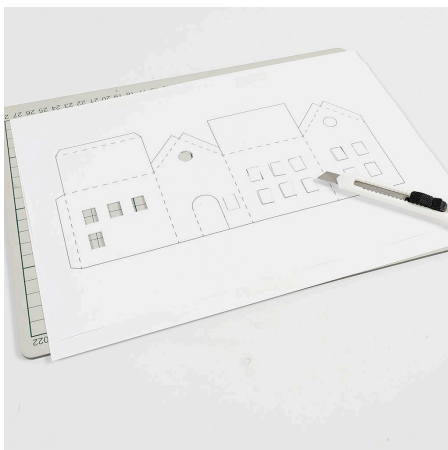

v14987

Illuminated houses with LED tea lights are cut from card using a template and assembled with double-sided adhesive tape. Vellum paper is attached behind the holes for windows.

Comment faire

1 Print out a template for each house. Attach the template onto a piece of white card, cutting through both layers simultaneously without the template moving. Don't cut out the outline of the house just yet.

2 Cut out the windows and the door, followed by the outline of the house.

3 Score along the dotted lines by using a bone folder or a blunt cross stitch needle.

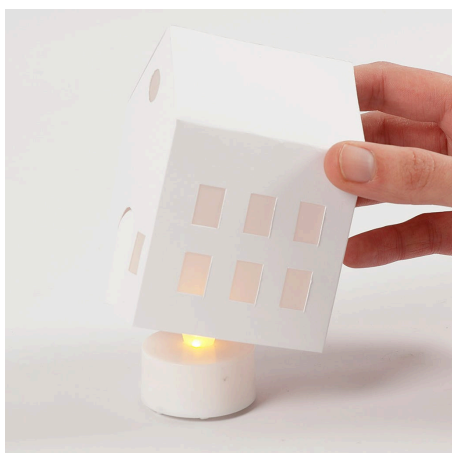

4 Attach double-sided adhesive tape onto the flaps.

5 Turn over so the back is facing you and attach double-sided tape above, underneath and between the windows. Attach vellum paper (onto the double-sided adhesive tape).

6 Fold all score lines. Remove the protective paper from the double-sided tape piece by piece and assemble the house.

7 Place the house over an LED tea light.
