

Christmas Trees from punched-out Faux Leather Paper Shapes

v14986

These Christmas trees on a wooden stand are made from pre-made punched-out faux leather paper snowflakes pushed onto a wooden flower stick with wooden beads inbetween.

Comment faire

1 Use a Screw Punch on the middle hole setting to make holes in the middle of the snowflakes.

2 Apply a small blob of glue onto the flower stick and push a bead onto the area with the glue. You may slightly sharpen the stick if it is not already pointed.

3 Now push the snowflakes alternating with the beads onto the stick. Start with four large snowflakes, then four medium-sized snowflakes, then four small ones and finally four mini snowflakes. Finish with a bead.

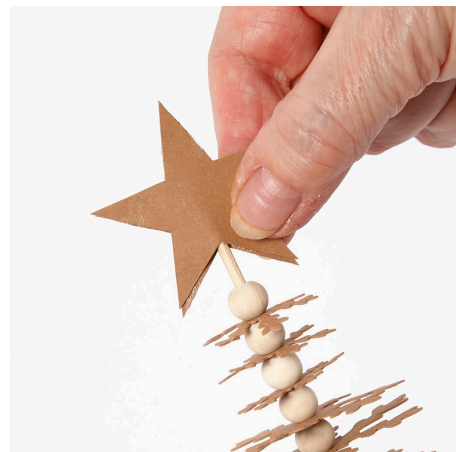

4 Use the template to cut out two stars from faux leather paper for each tree.

5 Glue the two stars in pairs either side of the pointed end of the flower stick.

6 Press the stars together between your fingers or with a couple of small pegs until the glue has dried.

7 Trim one of the flower sticks if you want the trees to be different heights.

8 Push the glue into the hole on the wooden stand and place the flower stick into the hole.

9 Another variant with gold faux leather paper.
