

## A Jellyfish from a Rice Paper Lamp and Tulle decorated with Stickers

v15219

Transform a rice paper lamp into a dreamy jellyfish with tulle tentacles lit by battery-powered LED lights.

### *Comment faire*

**1** Cut off the bottom three rings of the lamp using pliers.

**2** Now cut along the ring and fold the excess rice paper around the ring to conceal it.

**3** Place layers of tulle on top of each other. The more layers of tulle, the fuller the jellyfish. Here we have used six layers.

**4** Place a plate on top of the tulle to keep it in place and cut around the plate.

**5** Place a mug in the middle of the tulle circle and cut along the edge of the circle all the way round gradually towards the middle, making a spiral.

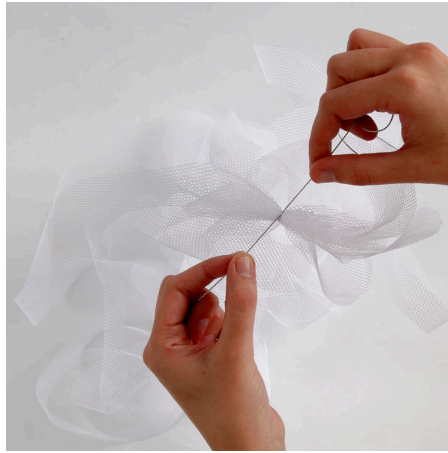

**6** The tulle curls up gradually by itself as the spiral grows longer.

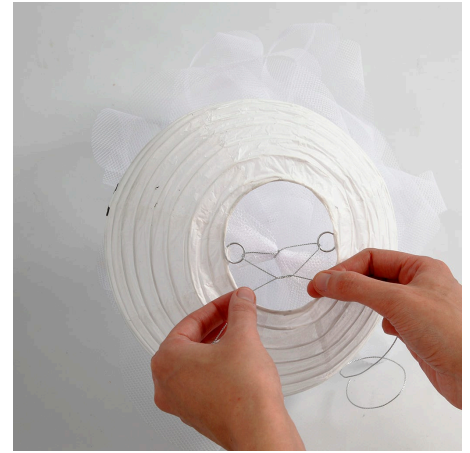

**7** Continue to cut the spiral until you run out of tulle.

**8** Gather all the layers of tulle strips and find the middle. Tie a 3 meter piece of string around the middle and finish with a knot.

**9** Feed each end of the string through the loops at the top of the lamp. The tulle now hangs down through the lamp.

**10** Cut the tulle at a suitable length. Attach sticker eyes and stars onto the lamp shade and the tulle.

**11** Insert battery-powered LED lights inside the lamp shade. You may wrap the wire around the string.
