

A Candlestick on a wooden Base with Toadstools decorated with mini Glass Beads

v15447

This candlestick on a wooden base for, for example, an Advent candle, is decorated with wooden toadstools and mini glass beads in different colours and sizes attached with sticky base transparent, self-hardening modelling gel.

Comment faire

1 Apply a thin coat of sticky base transparent, self-hardening modelling gel onto the toadstool cap without covering the entire cap. Mix mini glass beads in different sizes and colours in a bowl. Dab the cap of the toadstool into the mix and press the beads firmly into the sticky base transparent, self-hardening modelling gel.

2 Apply sticky base transparent, self-hardening modelling gel onto your chosen areas on the wooden candlestick and sprinkle mini glass baubles onto the gel. Press them on firmly. Use sticky base transparent, self-hardening modelling gel for attaching the toadstools onto the wooden base of the candlestick.
