

## Greeting Cards with dried Flower Designs and a Deco Foil Frame

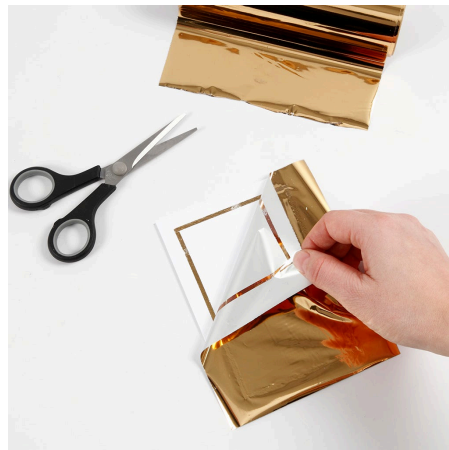

v15451

Make your own greeting cards from dried flowers framed in a deco foil frame. Draw your own designs and finish them with dried and pressed flowers in beautiful colours.

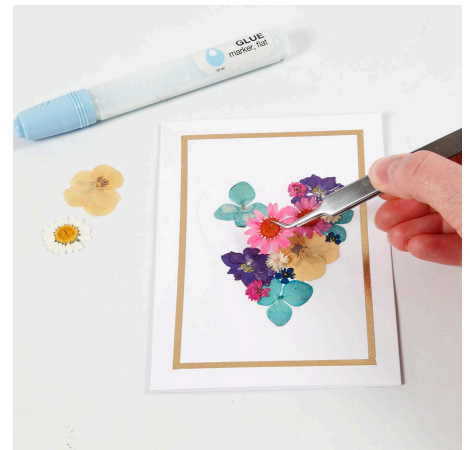

### *Comment faire*

**1** Make a frame on the greeting card by attaching a double-sided adhesive tape frame 1 cm from the edge of the greeting card.

**2** Remove the protective plastic from the double-sided adhesive tape and place the deco foil onto the sticky tape with the gold side facing up. Rub with a finger and carefully remove the deco foil sheet. If the deco foil has not transferred completely, just repeat the process and rub on a new piece of deco foil.

**3** Draw a design with a faint pencil line (pencil lines are visible through some flower petals). Glue on the dried flowers inside the lines of your design. You may use a pair of tweezers for handling the delicate flowers.
