

Shiny star hanging decorations made from Sticky Base and glitter

v15767

Make a hanging star from Sticky Base mixed with artificial snow glitter in different variants. Mould the star inside a shape cutter and leave to dry.

Comment faire

1 Take a blob of Sticky Base and push it into the artificial snow glitter.

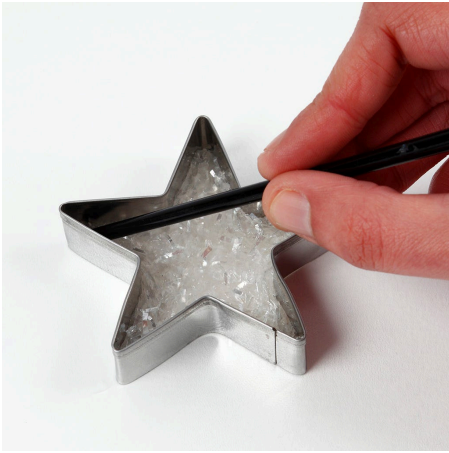

2 Knead the Sticky Base with the glitter.

3 Push the mixture into the shape cutter as shown in the photo. A tip: Place the shape cutter on top of a plastic surface, for example, a plastic pocket as the Sticky Base sticks to absorbent surfaces such as wood and papier-mâché etc.

4 You may use the end of a brush handle or a wooden flower stick to get the mixture all the way into the narrow points of the star.

5 Leave the star to dry for approx. 24 hours. The drying time depends on the thickness of the star. In this photo you can see the different kinds of artificial snow glitter mixed with Sticky Base.

6 Carefully remove the star from the shape cutter when dry.

7 Thread a needle with silver thread for hanging and push the needle through one of the star points.
